

# IT GETS WORSE PROJECT

Educating Young People About The Negative  
Consequences Of Homosexual Lifestyle

Joey McGoebbels

Jett and Jahn Media

# Introduction

Back in April, Gay activist Dan Savage bullied Christian Kids at the National High School Journalism Convention in Seattle, Washington.

Savage is known for creating the “It Gets Better” Project to prevent suicide among homosexual teenagers. Savage recruits celebrities to record videos with the message that homosexual teens’ lives will improve as they get older.

However, life actually gets WORSE for homosexuals as they get older.

Scientific studies show:

- They typically don’t have faithful, monogamous relationships
- They are more likely to be abused by their partner
- They have higher rates of STD’s (including HIV/AIDS)
- They are physically unable to conceive children
- If they do adopt, their child grows up without a mother or father

Jett & Jahn Media decided we needed to respond to Savage’s “It Gets Better” Project and confront their lies.

On May 1st, we announced the “It Gets Worse” Project to educate young people about the negative consequences of the homosexual lifestyle.

After we compiled scientific articles and collected videos to use for our program, we wrote this series of educational articles to present the truth about homosexuality.

# The Hidden Consequences of Homosexuality

## It's Not "Compassionate" To Encourage Unhealthy, Destructive Behavior

The dangers of homosexuality are being concealed by the liberal media.

The truth is now considered "hate speech" and anyone who disagrees is "homophobic".

In fact, much of the health industry now promotes homosexuality.

**Dr. Joseph Nicolosi** claimed "most medical groups have embraced the homosexual agenda and are advocating that lifestyle despite all the scientific studies and medical evidence that demonstrate medical and psychological risks. Homosexual activism and political correctness are clearly trumping science."

Dr. Nicolosi is a clinical psychologist and the founder of the National Association for Research and Therapy of Homosexuality (NARTH).

He promotes "conversion therapy", a rehabilitation program that transforms homosexuals into heterosexuals. Dr. Nicolosi claims homosexuality can be treated with psychology.

But why not let people love whoever they want? Why not be "accepting" and "compassionate"?

It's not "accepting" or "compassionate" to encourage unhealthy, destructive behavior.

In his book "The God of Sex", **Dr. Peter R. Jones** wrote:

"Gay sex is dangerous. Physical injuries of the intestines and the rectum come not from extremist behavior but from the actual regular practice associated with gay sex, for which the body was not designed – rimming, fisting, anal intercourse, barebacking, plus "golden showers," and direct contact with fecal matter".

The medical industry not only ignores these facts but actually tries to justify homosexuality. Most recently, UCLA conducted a "Sexual Identity Study" and claimed homosexuality naturally exists in mice.

Dr. Dean Byrd criticized their findings:

"There is no animal model that accurately reflects human sexuality. Pigs don't date, ducks don't go to church, and mice don't fall in love."

Human love is more than an attraction, it's a conscious decision of self giving sacrifice for others.

Sex is meant to be the physical expression of the spiritual love between a man and a woman.

Homosexual relationships are flawed because they lack the gender balance of heterosexuality.

The negative consequences of homosexuality have also been measured by science.

**Medical & Sociological studies show:**

- They have higher rates of STD's (including HIV/AIDS)
- They typically don't have faithful, monogamous relationships.
- They are more likely to be abused by their partner
- They are physically unable to conceive children (obviously)
- If they do adopt, their child grows up without a mother or father

# Homosexual Health Risks

## Scientific Research Examines Medical Dangers Of Homosexuality

Medical studies show that homosexuals have shorter life expectancy due to higher rates of cancer and sexually transmitted diseases.

In 1997, Simon Fraser University professor **Dr. Robert Hogg** conducted a study on the life expectancy of homosexual men.

His data showed that gay male's life expectancy is 8 to 20 years shorter than average.

He wrote "if the same pattern of mortality continues, we estimate that nearly half of gay and bisexual men currently aged 20 years will not reach their 65th birthday."

("Modeling the Impact of HIV Disease on Mortality in Gay and Bisexual Men"  
International Journal of Epidemiology, Volume: 27, Number: 3, 1997  
Pages: 657-661)

In 1982, University of Washington professor **Dr. Janet R. Daling** conducted a study examining the correlation between homosexual behavior and cancer.

Her findings were that anal intercourse increases the risk of anal cancer by 4000%. She wrote "other consequences include a higher risk of contracting chlamydia trachomatis, cryptosporidium, giardia lamblia, herpes simplex virus, human papilloma virus (HPV) or genital warts, isospora belli, microsporidia, gonorrhea, viral hepatitis types B & C and syphilis."

("Correlates of Homosexual Behavior and the Incidence of Anal Cancer"  
Journal of the American Medical Association, Volume: 247, Number: 14, 1982  
Page: 19, 88-90)

Studies also show that homosexual activity has spread HIV/AIDS.

In fact, a 1997 New York Times article claimed a young, male homosexual has nearly a 50% chance of getting HIV in their lifetime.

(Gay Culture Weights Sense & Sexuality  
The New York Times, November 23, 1997  
Section: 4, Page: 1)

In 1998, the **Centers for Disease Control (CDC)** conducted a study on HIV/AIDS patients.

Their data showed that 54% of AIDS patients in America were homosexual males and that 90% of them had acquired HIV through gay sex.

(HIV/AIDS Surveillance Report  
Centers for Disease Control & Prevention, June, 1998)

Later that year, the CDC conducted another study on the spread of HIV/AIDS.

They found that 50% of new HIV infections in United States are people under 25. They also found that 52% of AIDS patients among 13-to 24-year-olds are gay males.

(CDC Fact Sheet: "Young People at Risk  
"Center For Disease Control & Prevention, July, 1998)

Scientific studies claims that homosexuals have shorter life expectancy due to higher rates of cancer and sexually transmitted diseases.

# Homosexual Relationships: Dysfunctional

## Scientific Research Examines Homosexual Couples

Medical studies show that homosexual relationships aren't faithful or monogamous & often involve domestic abuse.

In 1978, **Dr. Alan P. Bell & Dr. Martin S. Weinberg** surveyed gay males to examine homosexuality. They worked for the Alfred C. Kinsey Institute For Sex Research, a pro-homosexual organization at the University of Indiana.

Dr. Bell and Dr. Weinberg asked homosexual men how many sexual partners they have had. The results were shocking:

| # of Sex Partners | Percentage |
|-------------------|------------|
| less than 10      | 15%        |
| 10-24             | 17%        |
| 25-49             | 15%        |
| 50-99             | 28%        |
| over 1,000        | 28%        |

In other words, 75% of gay men claimed to have had sex with more than 100 different men.

(Homosexualities: A Study of Diversity Among Men & Women  
New York, Simon and Schuster, 1978  
Page: 308)

In 1984, Northern Illinois University homosexual professor **Dr. Joseph Harry** surveyed gay males and homosexual relationships.

He determined that 66% of gay males had sex with other men within the first year of their relationship. He also found that 90% of gay males in a relationship longer than five years had sex other partners.

He wrote "for gay men, sex outside the primary relationship is ubiquitous even during the first year.

(Gay Couples  
New York, Praeger Books, 1984  
Page: 116)

In 1973, Washington University professors **Dr. Marcel T. Saghir & Dr. Eli Robins** also surveyed homosexual relationships.

Dr. Saghir & Dr. Robins found that 85% of gay males & 82% of lesbians had never been in a relationship beyond three years.

(Male & Female Sexuality: A Comprehensive Investigation  
Baltimore, The Williams & Wilkins Company, 1973Page: 57)

By contrast, heterosexual marriages are typically monogamous and faithful.

In 2007, Southern Illinois professor **Dr. James M. Hanslin** surveyed sexual practices among married couples.

Dr. Hanslin determined that only 6% of married heterosexuals had sex outside their relationship.

He also found that 25% of heterosexual cohabitating couples had sex with other partners.

(Exploring Social Life: Readings to Accompany Essentials of Sociology  
Canada, Pearson Education, 2007  
Page: 57)

Not only are homosexual relationships less faithful, but studies show they have high rates of domestic violence.

In 2000, University of Wisconsin-Eau Claire pro-homosexual professor **Dr. Susan Turrell** surveyed abuse in homosexual relationships.

The data was astounding:

**Gay Male Relationships:**

40% reported violence

13% reported sexual violence

83% reported emotional abuse

**Lesbian Relationships:**

55% reported violence

14% reported sexual abuse

84% reported emotional abuse.

("A Descriptive Analysis of Same-Sex Relationship Violence for a Diverse Sample"

Journal of Family Violence, Volume: 13, 2000

Page: 281-293)

Scientific studies show that homosexual relationships typically aren't faithful or monogamous & often involve domestic abuse.

# Homosexual Families: Unbalanced

## Psychologists Believe Children Need Mother & Father

Medical theories claim homosexual families do not provide children with a stable, gender balanced environment.

**Dr. Henry Biller**, a professor of clinical psychology at the University of Rhode Island wrote:

“There are hundreds of nuances about men and women that even newborn infants can readily distinguish and that makes a difference in the way the child develops.”

He believes “even if the father and mother behave in generally similar ways, they provide contrasting images for the infant. Mothers and fathers have different verbal styles when communicating. Involved fathers are more likely to stimulate the infant to explore and investigate new objects whereas mothers tend to engage their infants in relatively pre-structured and predictable activities. The father and mother offer the child two different kinds of persons to learn about as well as providing separate sources of love and support.”

In 2003, the **Catholic Church** wrote “Considerations Regarding Proposals to Give Legal Recognition to Unions Between Homosexual Persons”, which claimed:

“The absence of sexual complementarity in these unions creates obstacles in the normal development of children who would be placed in the care of such persons. They would be deprived of the experience of either fatherhood or motherhood. Allowing children to be adopted by persons living in such unions would actually mean doing violence to these children in the sense that their condition of dependency would be used to place them in an environment that is not conducive to their full human development.”

In other words, homosexual adoption does not provide children with a mother & father. This is not just a religious idea, but a widely accepted scientific theory.

**Dr. Jeffrey Satinover** was a professor at Yale University and the former president of the C.G. Jung Foundation. He holds degrees from MIT, the University of Texas, and Harvard University.

In 1997, the state of Florida asked him to testify about homosexual adoption in court. In his testimony, he claimed: "If two homosexuals wanted to adopt a child, I would have no objection to it if one of them was a man and one of them was a woman."

Dr. Satinover later explained, "In every area of life, cognitive, emotional, social, developmental, at every phase of the life cycle, social evidence shows that there are measurable effects when children lack either a mother or a father. The evidence is overwhelming. Mountains of evidence, collected over decades, show that children need both mothers and fathers."

Medical theories show that homosexual families do not provide children with a stable, gender balanced environment.

# Homosexuality: Violates Natural Law

Philosophers Believe Sexual Relationships Require Gender Balance

Liberals are quick to criticize Christians about contradictions in the bible.

They claim we should be more “accepting” and “tolerant”.

So, why do we believe homosexuality is wrong?

Not just because it’s in the bible, but it violates natural law.

The **Catechism of the Catholic Church** explains that “homosexual acts are intrinsically disordered. They are contrary to the natural law.” (CCC:2357)

The Catholic theory is based on natural law supported by science, biology and anthropology.

Ancient philosophers also believed sexual relationships required gender balance.

**In Laws, Plato wrote:**“When male unites with female for procreation the pleasure experienced is held to be due to nature, but contrary to nature when male mates with male or female with female, and that those first guilty of such enormities were impelled by their slavery to pleasure.” (636C)

So to summarize, Plato believed homosexuality was “contrary to nature” and homosexuals were motivated by their “slavery to pleasure”.

Christian theologians like **St. Augustine of Hippo** and **St. Thomas Aquinas** also believed there was a natural order in the universe.

Natural law also influenced the development of English common law. Philosophers like **Thomas Hobbes**, **John Locke**, and **Thomas Jefferson** were inspired by natural law.

The U.S. Declaration of Independence refers to “the Laws of Nature and of Nature’s God”.

So, what’s the punishment for violating natural law?

**In our past articles, we referred to scientific studies on homosexuality and showed:**

- They have higher rates of STD’s (including HIV/AIDS)
- They typically don’t have faithful, monogamous relationships
- They are more likely to be abused by their partner
- If they do adopt, their child grows up without a mother or father

Every conservative, traditional religion agrees on natural law.

All people can observe the negative consequences of homosexuality and recognize the true structure of the universe.

Thank you for following our series on homosexuality, we will continue to expose the myth with future articles/videos.

We encourage you to join our campaign by following us on Twitter (@No\_ItGetsWorse) or uploading your own “It Gets Worse” video to Youtube and linking to our website.
